Google Cloud H2S

AI Builder Cup

Build in JAPAC.
Build for the world.

Team Details

a. Team name: Project Telos
b. Team leader name: Kotana Sai
c. Problem Statement: Build an AI-powered solution that transforms how content is created, discovered, personalized, understood, or experienced.

Brief about the idea

A thumbnail is a promise. Does the video keep it?

Gemini checks both sides of the clickbait problem - before upload and before playback.

CREATOR STUDIO · BEFORE PUBLISHING

Compare visual and emotional promises with timestamped video evidence. Get a concrete fix, then recheck.

VIEWER FEED · BEFORE WATCHING

Match each video to declared intent. Hold bait-and-switches before the switch; let viewers watch, read, or skip.

Today’s tools help you win the click. Project Telos helps you keep the promise.

A sentiment contradiction is the tell: the topic matches, but the emotion is fake.

Opportunities

TODAY: OPTIMIZE THE CLICK

A/B tests predict engagement. Clickbait detectors label a thumbnail.

Neither checks whether the actual video delivers its promise.

TELOS: CHECK BOTH SIDES

Creators get timestamped Promise → Proof → Fix.

Viewers get an intent-first feed, checked before playback.

UNIQUE SIGNAL: EMOTION

Detect sentiment contradiction: the topic matches, but the thumbnail's feeling does not.

Evidence and a fix - not just a score.

OUR USP **Promise → Proof → Fix, grounded in multimodal analysis of the actual video.**

List of features offered by the solution

CREATOR STUDIO

Flexible checks
Upload a draft, paste a YouTube link, or open a reviewed example.

Promise → Proof → Fix
Each promise gets video evidence, a timestamp, and a concrete edit.

Emotion + visual checks
Measure emotion gap; flag ghost objects and exaggerated visuals.

Revise + recheck
Get an honest title or optional Imagen thumbnail; compare revisions.

VIEWER FEED

Declare intent
Set an editable goal, topics, and boundaries.

Understand before play
Show a verdict first; no player loads until the viewer chooses Watch.

Pause the switch
Hold just before the bait-and-switch and explain why.

Choose + keep a receipt
Watch, read a clean summary, or skip; record what was allowed or held.

Process flow diagram or Use-case diagram

CREATOR · CHECK BEFORE PUBLISHING

01 INPUT
Thumbnail + title
Draft, transcript, or link

02 ANALYZE
Gemini scans visuals, entities, and sentiment

03 EVIDENCE
Promise → Proof → Fix
Emotion gap + timestamps

04 IMPROVE
Revise the title or image
Recheck before publishing

VIEWER · CHECK BEFORE PLAYBACK

01 INTENT
Goal + topics
Boundaries

02 CHECK
Gemini understands each video against intent

03 GATE
Matches / bait switch / off-topic

04 CHOOSE
Watch / clean summary / skip

Nothing plays until the viewer chooses.

Wireframes/Mock diagrams of the proposed solution (optional)

ILLUSTRATIVE WIREFRAME · CREATOR STUDIO + VIEWER FEED

CREATOR STUDIO **Strong mismatch · review before publishing**

PROMISE	VIDEO PROOF	FIX
Kitchen on fire	Calm recipe; no fire	**Remove flames**
Panic / alarm	Friendly cooking demo	**Match the mood**
One-pan recipe	Shown throughout	**✓ Promise kept**

EXPECT: Panic 95 ≠ VIDEO: Calm 15

Suggested honest title · [Revise and recheck]

✓ CHECKED BEFORE YOU WATCH

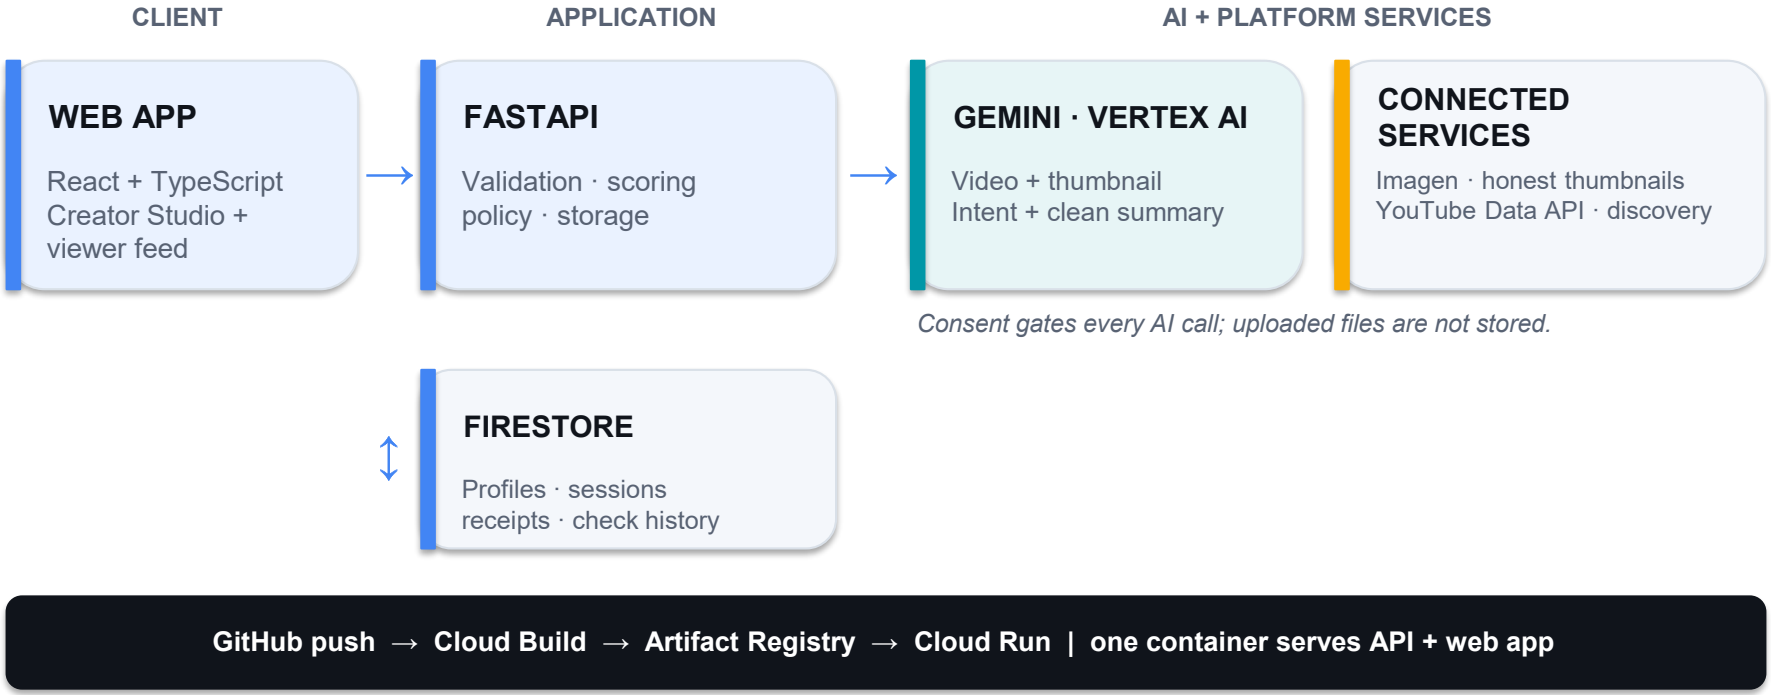

The first 0:13 fits your intent.

[Watch the first 0:13]

⏸ Paused at 0:13
From 0:14: incident

[Clean summary] **[Skip]**

Architecture diagram of the proposed solution

Technologies to be used in the solution

Layer	Technology	Role
Generative AI	**Gemini** (Vertex AI)	Multimodal thumbnail and video analysis, intent parsing, summaries
Image generation	**Imagen**	Honest replacement-thumbnail suggestions
Hosting	**Cloud Run** + Cloud Build	One container for API and web app; deploys on every push
Database	**Firestore** (Firebase)	Profiles, sessions, receipts, analyses, creator check history
Discovery	YouTube Data API v3	Interest-based search and official metadata
Web	React, TypeScript, Vite, Tailwind CSS	Creator Studio and viewer feed
API	Python, FastAPI, Pydantic	Validation, scoring, policy, storage
Optional	BigQuery, Cloud Translation	Analytics, multilingual drafts

Estimated implementation cost (optional)

No fixed estimate yet: measure live cost per check before scaling.

Main cost drivers and the controls already in the prototype

COMPUTE

Cloud Run uses request-based billing. Stateless service scales horizontally; cap at 3 instances.

AI CALLS

Gemini is the main variable cost: two focused scans per creator check. Imagen is optional.

DATA + DISCOVERY

Firestore keeps short summaries. Uploaded files are not stored; YouTube search uses its API.

RATE-LIMIT AI REQUESTS · SET QUOTAS · ALERT AT 50% / 90% / 100% OF BUDGET

Snapshots of the prototype

SAME RECIPE VIDEO · DIFFERENT THUMBNAIL PROMISE

OVERSOLD PROMISE

Strong mismatch · test run

Fire is absent from the calm recipe.
Fire flagged; emotion gap 85 vs 10.

HONEST PROMISE

Matches · test run

One-pan spaghetti, meatballs, 30 minutes.
All 3 promises kept; emotion 10 vs 10.

Prototype test drafts; exact live Gemini scores can vary.

Prototype Performance report/Benchmarking

MISLEADING DRAFT · SCORE 100

“KITCHEN ON FIRE?!” on a calm recipe. Fire flagged with a fix; recipe promise kept. Emotion: 85 vs 10.

HONEST REVISION · SCORE 0

“One-pan spaghetti & meatballs.” All 3 promises kept; emotion: 10 vs 10.

VIEWER GATE

Switch at 0:14; playback pauses at 0:13.

RELIABILITY

Malformed timestamps are corrected or dropped—not allowed to erase a verdict.

WHAT IS NOT MEASURED

Labeled-set accuracy, latency at scale, and user studies. A score is a review signal—not proof of intent.

Scores shown are observed prototype checks, not a benchmark guarantee.

Additional Details/Future Development (if any)

NOW · SAFE TO TRY

- Consent before Gemini; uploads are not stored.
- Service identity for Vertex AI; secrets in Secret Manager.
- Schema checks, one retry, and “unverified” when evidence is insufficient.
- Rate limits, 3-instance cap, and monthly budget alerts.

NEXT · BUILD CONFIDENCE

- Benchmark honest vs. misleading thumbnails; publish false-positive rates.
- Integrate a pre-publish check into creator upload flows
- Extend declared-intent protection to real feeds.
- Speed up long-video checks with adaptive scene sampling and parallel segment analysis.
- Evaluate multilingual performance with Cloud Translation.
